

Perspectives on Investment Trends in Generative AI

Joe Chang
Managing Director
Prosperity 7 Ventures

About Prosperity 7 Ventures

- Saudi Aramco's new \$1B Diversification Ventures Fund
- Named after and inspiration from Prosperity Well
- Aimed in investing in most disruptive and innovative companies to help transform Aramco and KSA
- Help the world's most important start-ups solve the world's most important problems

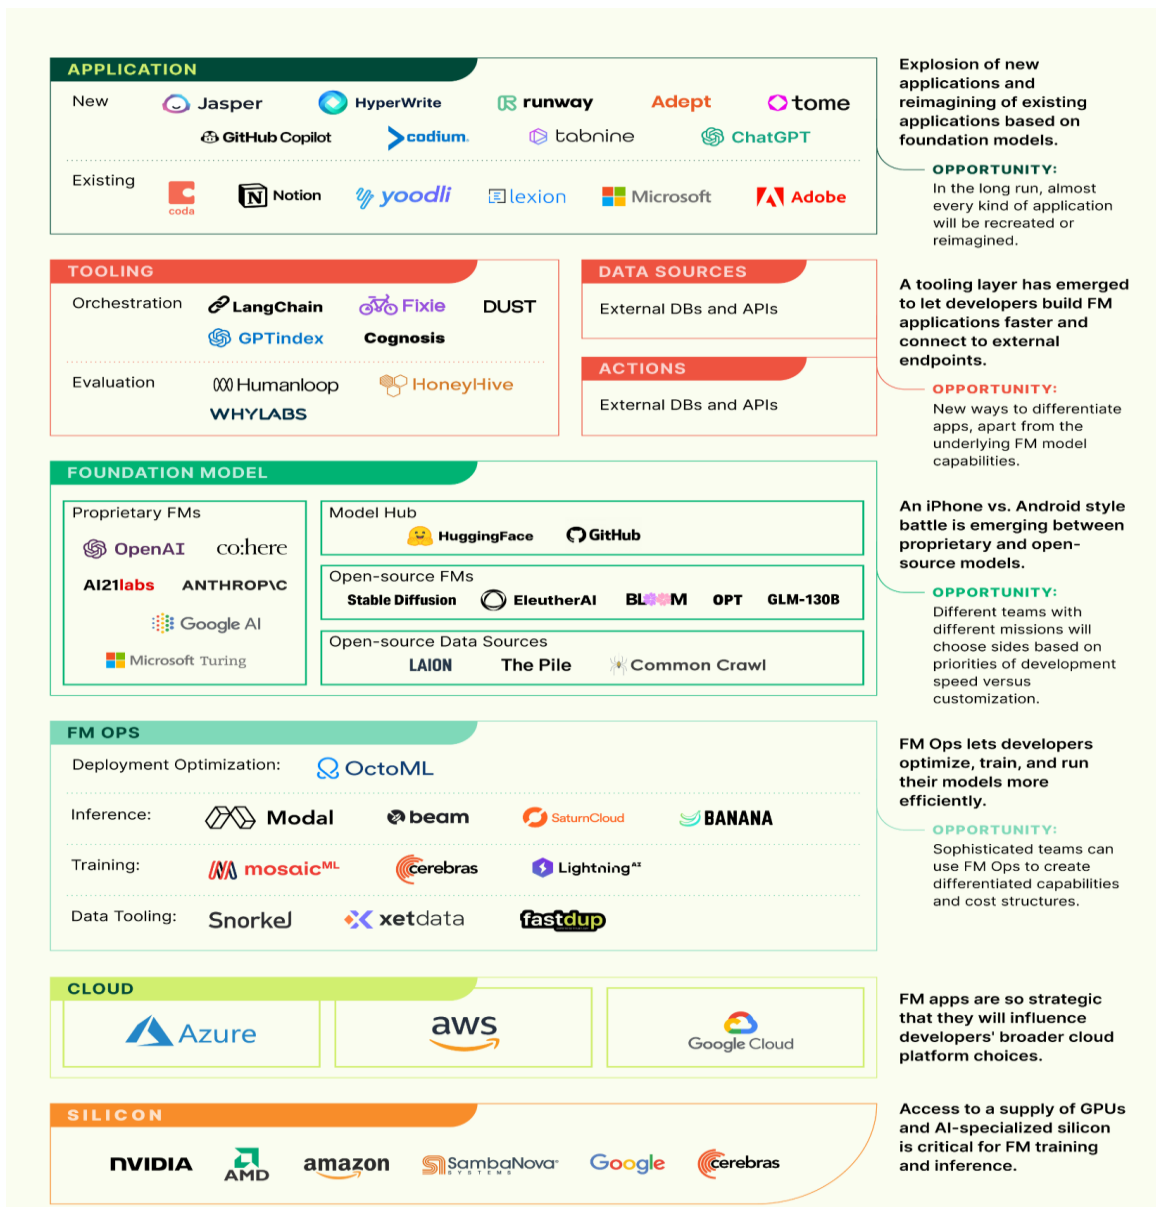

Generative AI

- What's new: AI generating new content based on data sets vs. analyzing/processing data for insight
- Creative industries and content generation (and coding); replacing (appending) human labor
- Drive innovation across wide range of fields
- Implications wide ranging (already landing, even in VC)
- Not all good – bias, deception, malevolent AI (and ethics)

Investments across Generative AI Tech Stack

Investments across the technology stack

- Applications source of real value creation
- Enabling tools – e.g vector search
- Foundational Models – platforms/ecosystems – potential successors to FAAMG (US game over? Opportunity for China)
- Enabling infrastructure (tech stack ripe for disruption)

What's Coming

- Broader theme of machines (including robots, blockchain) replacing/appendending human labor
- Societal implications (disruption to world order, UBI)
- Downfall or advancement of humanity?

THANK YOU
